# Creating trading accounts part 1 of 2

Each bot requires a dedicated trading account for optimal results.

For our bots "Monster", "Megatron", "Nebula", "Gold HighRisk" and Gold "UltraHighRisk" please use the account type "Raw Spread".

Please note that each bot requires its own trading account. This means that if you want to use two or more bots, you will have to repeat this process as often as necessary.

To open another trading account, go to "Accounts" in the left menu and "+ Open new Live Account" on the right.

The screenshot displays the iC Trading interface. On the left, a dark sidebar contains a menu with 'Accounts' highlighted by a red box. Below it are options for Deposit, Withdraw, Transfer, and Trades. The main content area is white and features a navigation bar with 'Live Accounts', 'Demo Accounts', 'Wallet Accounts', and 'Transaction History'. Under 'Live Accounts', there is a section for 'MT4 Accounts' with a '+ Open New Live Account' button highlighted by a red box. Below this, there are four 'TRADING ACCOUNT' cards, each with a gear icon.

You can move funds from one trading account to the next using the “Transfer” button.

To do this, select the transferring and receiving trading account as well as the transfer amount .

The transaction only takes a few minutes.

# Withdrawing from a trading account

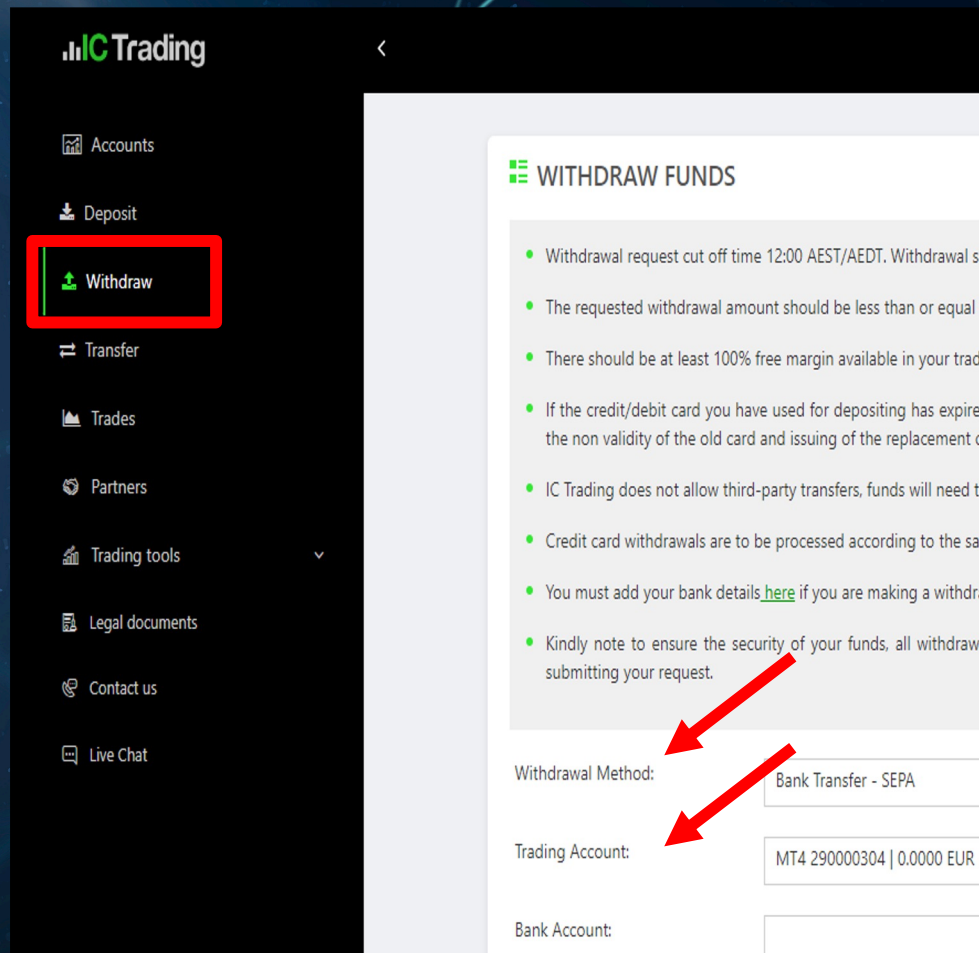

Funds can be paid out via the “Withdraw” menu item .

Select your withdrawal method , e.g. Bank Transfer .

Select the outgoing account and the transfer amount .

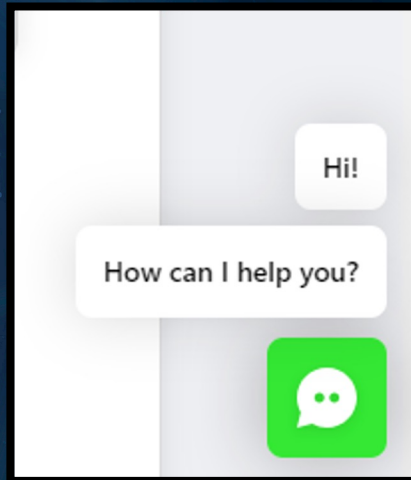

Confirm the desired withdrawal amount.

**Tip:** Before making a withdrawal, please first transfer the desired amount from the active trading account where bots are involved to another trading account that is free of bot activity. You can then withdraw the funds from this second account to your bank account. This step is important because there is a delay in the transfer to your bank account. During this delay, the bots could already start new trading cycles.
